

TURNING CONCRETE INTO A WORK OF ART

Enter the new world of concrete. Concrete is no longer plain grey broom finish or a fancy exposed aggregate finish. You can colour and stamp concrete in unlimited number of ways both new concrete surfaces or enhance old existing concrete. You can apply these techniques both outdoors on your driveways patios or walks as well as in your basement or even in your kitchen and living areas.

STAMPED CONCRETE

Normally used when pouring new concrete, but can also be a topping used indoors such as Polytop. Typically the concrete is coloured and poured in place. After the concrete semi-sets a colour release agent is sprinkled on the surface and then a texture mat is used to imprint a pattern into the semi-hard concrete. After the concrete sets the excess release is washed off revealing a two tone coloured concrete textured surface.

ACID STAINING

Acid Staining is a treatment used on existing concrete to colour concrete providing an uneven, mottled variegated and/or translucent colour effects that are unique to each concrete surface. The results are similar to the natural shading of stone. Each job is unique and becomes a work of art.

SPEC-DECK

Spec-Deck is an attractive and proven method for resurfacing or refinishing old existing concrete areas into exciting new looking surfaces. Spec-Deck can be applied in one or a combination of colours, smooth or textured, with an unlimited number of custom patterns onto your driveways, side walks, patios, basements and even retail floor areas.
